The two channel antenna multicoupler is used for compact distribution of two independent RF and VHF/UHF signals. Each channel provides 4 decoupled outputs. The frequency ranges covers $1.5 \ldots 30 \mathrm{MHz}$ (channel 1) and $20 \ldots 3000 \mathrm{MHz}$ (channel 2).

Design
The multicoupler is housed in a 19" subrack with very good RF shielding and consists of the following subassemblies:

- low noise RF amplifiers
- power divider 4-way
- power supply unit

All the necessary signal, power supply and earthing connections are provided at the rear.
The mains switch is located on the front panel.
Special features
The unit is constructed using a modular approach utilising plug-in sub-assemblies which enable ease of installation and maintenance.
