

Antenna multicouplers are used in modern receiving stations and provide distribution of one antenna signal to several receivers without loss and deterioration of the signal quality.  
This model distributes one VHF/UHF signal to 4 or 8 outputs in the frequency range 20...1300 MHz.

### Design

The multicoupler is housed in a 19" subrack with very good RF shielding and consists of the following sub-assemblies:

- HF amplifier
- power divider 4- or 8-way
- power supply unit

All the necessary signal, power supply and earthing connections are provided at the rear.  
The mains switch is located on the front panel.

### Special features

The unit is constructed using a modular approach utilising plug-in sub-assemblies which enable ease of installation and maintenance.
